FAQ: Leyland 680 Engine

Q1: What is the typical horsepower output of a Leyland 680 engine?

A1: The horsepower output varies slightly depending on the specific application and tuning, but it generally ranges from around 150 to 200 bhp. It's crucial to remember that torque, rather than horsepower, was the primary focus of its design.

Q2: How often should I change the oil in a Leyland 680 engine?

A2: Consult your owner's manual for specific recommendations, but generally, oil changes should be performed more frequently than in modern engines, perhaps every 5,000-7,000 miles or 6 months, depending on usage. Using high-quality oil suited for heavy-duty diesel applications is crucial.

Q3: Where can I find parts for a Leyland 680 engine?

A3: Finding parts can require some effort. Specialised suppliers of classic truck and commercial vehicle parts, online marketplaces (such as eBay), and salvage yards are potential sources. Leyland enthusiast forums and online communities can also be invaluable for locating rare or hard-to-find parts.

Q4: Is it difficult to work on a Leyland 680 engine?

A4: While not overly complex, working on a Leyland 680 engine requires mechanical aptitude and the right tools. Accessing some components can be challenging, so having a workshop manual and specialized tools will be beneficial.

Q5: What are the fuel consumption characteristics of the Leyland 680 engine?

A5: Fuel consumption is largely dependent on the load and operating conditions. However, expect relatively high fuel consumption compared to modern engines due to its age and technology. It was designed for power and longevity, not fuel efficiency.

Q6: What are the common causes of a Leyland 680 engine not starting?

A6: Common causes include low battery voltage, fuel system issues (clogged filters, faulty injectors), problems with the starting motor, or issues within the engine's ignition system (if applicable). Systematically checking these areas will help diagnose the problem.
