The IH P injection pump is a complex piece of machinery, typically a rotary type, consisting of several key components:

- **Cam Plate:** This is the heart of the pump, responsible for timing and controlling fuel delivery. Wear on the cam plate is a common cause of injection pump failure.
- **Plungers:** These precisely machined components draw fuel and inject it under pressure into the cylinders.
- **Delivery Valves:** These valves control the timing and amount of fuel delivered to each cylinder.
- **Governor:** This regulates the fuel supply based on engine speed and load demands, ensuring optimal performance across various operating conditions.
- **Fuel Supply and Return Lines:** These ensure a consistent supply of fuel to the pump and return any excess fuel to the tank.

The International Harvester parts manual provides detailed diagrams and explanations of each component, aiding in identification during maintenance or repairs.
